Major Changes from DAD 1.0 to DAD 2.0

- Funding Source Specific Intake

  When creating service requests and projects, the data elements and their options are triggered based on the funding source.

- Project Type Specific Data Collection

  Different project types have distinct data elements for collection of PPR narrative and group advocacy data collection.

- Added Security Features

  Service requests and projects can be restricted from view based on employee assignment or restriction settings.

- Integration of Timekeeping Configurations

  Settings for time increments and lockout periods are now application wide.

- Introduction of Funding Source Categorization

  Funding sources can be specified for use with a service request or a project, and can be specified as a being calculated in direct billed time entries or not calculated.

- Added Administrative Controls

  Local administrators control the funding source configurations for funding specific items.

- Increased Reporting Functionality

  Report templates can now filter on locally created data elements as well as all nationally hosted data elements. Date ranges have also been simplified for easier filtering by being separated into a date range category.
